## AIR-E-TAINER ${ }^{\circledR}$

## Pre-pressurized Well System Tanks

0. 

How is it possible for the pre-charged tanks to hold the same amount of water as conventional tanks even though they are smaller?

Tanks are sized based on the amount of water provided before the water pressure drops enough to turn on the pump. Galvanized tanks are very inefficient and leave most of their stored water in the tank when the pump turns on.
Pre-charged tanks are very efficient and will provide you with more water between pump cycles.

STR

## WATER SYSTEMS

## FEATURES AND BENEFITS

- Positive lock internal clench ring prevents slipping. Diaphragm draws down in concave manner, eliminating "wrinkle pattern" which can become brittle and crack.
- Threaded top nut for easy pump stand installation.
- True air flow design reduces condensation.
- Patented controlled action diaphragm is FDA approved butyl rubber construction - not plastic.
- Paint cap on elbow eliminates connection problems. 5 year limited warranty.
- Adjustable air charge.
- Airtight welds.
- Two part urethane finish over epoxy primer for durability and luster.
- Will not waterlog.
- Diffuser directs water flow up and out while locking lower diaphragm in place.

Do I need to change my plumbing to replace my galvanized tank with a pre-charged tank?

Some adjustments will be necessary.
A complete set of instructions are included with each pre-charged tank that will help you with the installation.

How do I know what size to buy?

If you already have a pre-charged tank simply buy one of the same physical size. If you have a conventional tank use the chart below.

| CAPACITY | 42 GALLONS | 82 GALLONS | 120 GALLONS | 220 GALLONS |
| :---: | :---: | :---: | :---: | :---: |
| Galvanized Tank Measure | $20^{\prime \prime} \times 34^{\prime \prime}$ | $20^{\prime \prime} \times 63^{\prime \prime}$ | $24^{\prime \prime} \times 65^{\prime \prime}$ | $30^{\prime \prime} \times 78^{\prime \prime}$ |
| Diaphragm Equivalent Model | $15-3 / 8^{\prime \prime} \times 21-1 / 4^{\prime \prime}$ | $20^{\prime \prime} \times 38-5 / 8^{\prime \prime}$ | $23-3 / 8^{\prime \prime} \times 38-5 / 8^{\prime \prime}$ | $23-3 / 8^{\prime \prime} \times 59^{\prime \prime}$ |

## WATER SYSTEMS

## HOW THE STAR AIR-E-TAINER ${ }^{\circledR}$ WORKS

## STAR DIAPHRAGM AIR-E-TAINER ${ }^{\circledR}$ SIZING GUIDE

Make sure you have a tank size suited to your present plumbing system.
You may need to switch to a higher or lower capacity model to match the system.
To select the proper size tank, count the number of fixtures in your home (sinks, showers, bathtubs,
toilets, dishwashers, faucets, washing machines, outside faucets, etc.)
The proper tank volume is three (3) times the number of fixtures.

See examples below:

| NUMBER OF <br> FIXTURES | TANK VOLUME | AIR-E-TAINER <br> TANK |
| :---: | :---: | :---: |
| 5 | 14 | 132661 or larger |
| $6-8$ | 20 | 132662 or larger |
| $9-11$ | 36 | 132663 or larger |
| $12-15$ | 52 | 133517 or larger |
| $16-21$ | 65 | 136875 or larger |
| $22-30$ | 86 | 135460 or larger |
| 31 plus | 119.5 | 136876 or larger |

If you have a heat pump, hot tub, sprinkler system or irrigation system, choose a tank one model larger.

*Compact In-Line Tank.
**Horizontal Tank with Mounting Bracket.
***In keeping with current industry standards, drawdown factors are based on Boyle's law. Actual drawdowns will vary depending upon system variables, including the accuracy and operation of the pressure switch and gauge and operating temperature of the system.
Caution: install a pressure relief valve on any installation where the pump pressure can exceed the tank's maximum working pressure.
NOTE: Pre-charged tanks cannot ship via air freight.
